ENGR3450 – Project Management

Week 8
The Project Planning
Resource Allocation

Halil POSACI – Dr. Esra Ekinci 2018, İzmir

Agenda today

- CPM Schedule Compression
 - Crashing and Fast Tracking a project
- Creating and Allocating Resources
- Resource loading and leveling
- Constrained resource allocation
 - Heuristic methods and optimization models
- Resource Management summary of PMI
- - The last Workshop 5 Pts.
 - Problems from Ch 9.

Schedule Compression

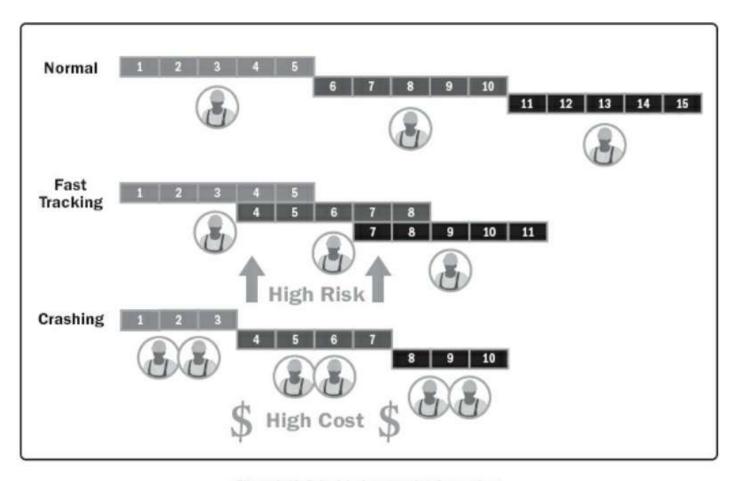

Figure 6-19. Schedule Compression Comparison

Schedule Compression Crashing

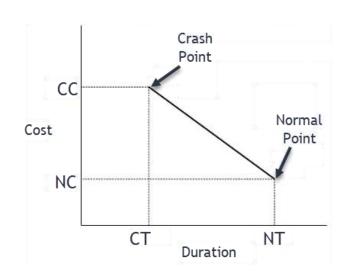

Table 9-1 An Example of Two-Time CPM

| Activity | Precedence | Duration, Days (normal, crash) | Cost (normal, crash) |
|----------|------------|--------------------------------|----------------------|
| a | S-13 | 3, 2 | \$40, 80 |
| b | a | 2, 1 | 20, 80 |
| c | a | 2, 2 | 20, 20 |
| d* | a | 4, 1 | 30, 120 |
| e** | b | 3, 1 | 10, 80 |

^{*}Partial crashing allowed

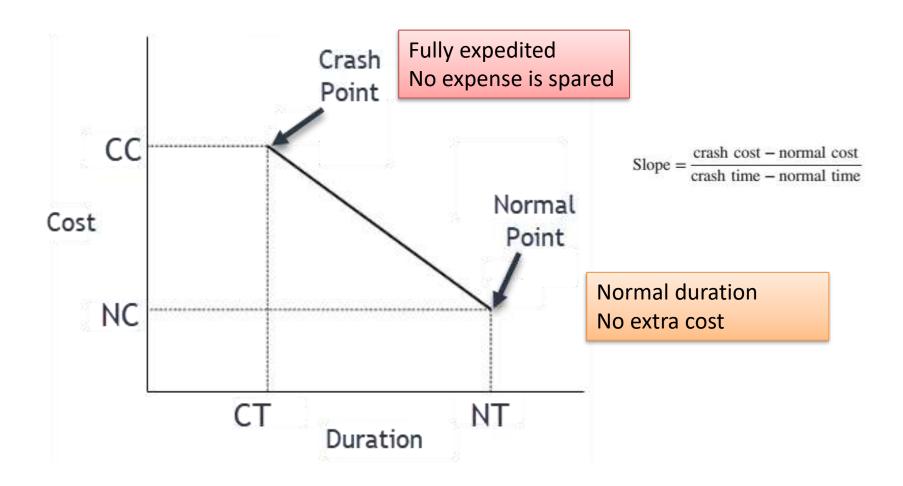

Table 9-2 Activity Slopes-Cost per Period for Crashing

| Activity | Slope (\$/day) |
|----------|----------------|
| a | 40/-1 = -40 |
| b | 60/-1 = -60 |
| c | _ |
| d | 90/-3 = -30 |
| e | -70 (2 days) |

^{**} Partial crashing not allowed

Schedule Compression Crashing

Schedule Compression Crashing – A CPM Example

Table 9-1 An Example of Two-Time CPM

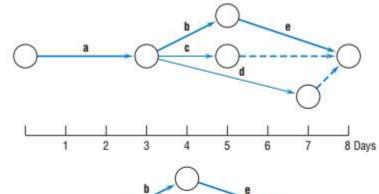

| Activity | Precedence | Duration, Days (normal, crash) | Cost (normal, crash) |
|----------|--------------|--------------------------------|----------------------|
| a | <u>≅ 7</u> 8 | 3, 2 | \$40, 80 |
| b | a | 2, 1 | 20, 80 |
| c | a | 2, 2 | 20, 20 |
| d* | a | ₩ 4, 1 | 30, 120 |
| e** | b | 3, 1 | 10, 80 |

^{*}Partial crashing allowed

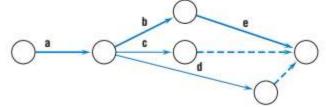

Table 9-2 Activity Slopes–Cost per Period for Crashing

| Activity | Slope (\$/day) | | |
|----------|----------------|--|--|
| a | 40/-1 = -40 | | |
| b | 60/-1 = -60 | | |
| c | _ | | |
| d | 90/-3 = -30 | | |
| e | -70 (2 days) | | |

a. Normal Schedule, 8 Days, \$120

b. 7-Day Schedule, \$160

^{**} Partial crashing not allowed

Schedule Compression Crashing – CPM Example

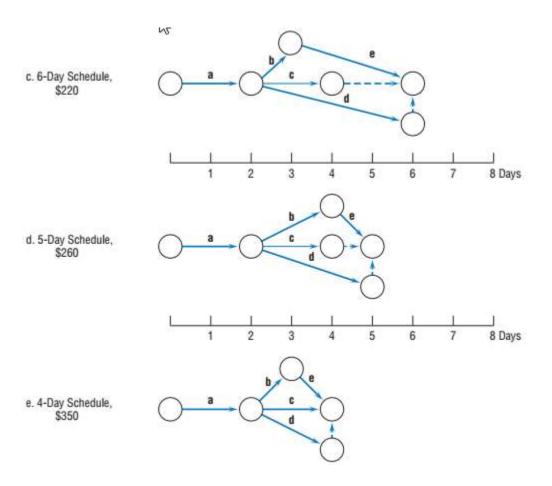

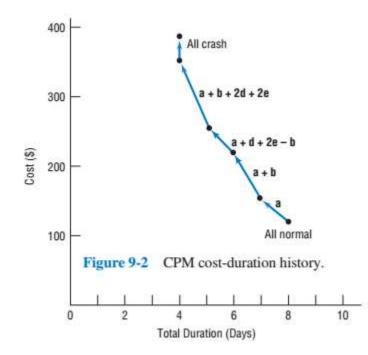

Table 9-2 Activity Slopes–Cost per Period for Crashing

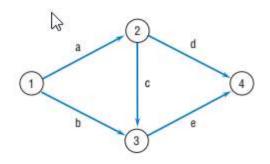

| Activity | Slope (\$/day) | | |
|----------|----------------|--|--|
| a | 40/-1 = -40 | | |
| b | 60/-1 = -60 | | |
| c | _ | | |
| d | 90/-3 = -30 | | |
| e | -70 (2 days) | | |

7

Schedule Compression Crashing – A solved problem

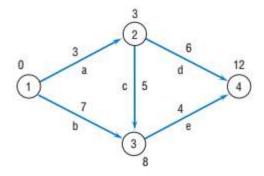

Given the following network (time in days):

| Activity | Crash Time, Cost | Normal Time, Cost | Partial Crashing? |
|----------|---------------------|----------------------|----------------------|
| a | 3, \$60 | 3, \$60 | No |
| b | 6, 80 | 7, 30 | Yes |
| c | 2, 90 | 5, 50 | No |
| d | 5, 50 | 6, 30 | No |
| e | 2, 100 | 4, 40 | Yes |

Find the lowest cost to complete the project in 10 days.

Answer:

Current time and cost: 12 days and \$210

Since the critical path is a-c-e, we only initially need to consider these three activities:

a: cannot be crashed

c: can cut 3 days at an extra cost of \$40 but, due to b, only results in project completion by day 11. To reach 10 days, cut b by 1 day, total extra cost \$90.

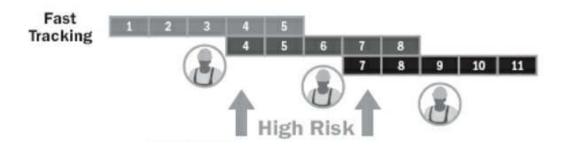

e: can cut e by 2 days for an extra cost of \$60 and results in project completion by day 10.

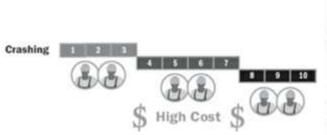

Thus, cut e 2 days at a cost of \$60.

Schedule Compression Fast Tracking

Fast Tracking: A schedule compression technique in which activities or phases normally done in sequence are performed in parallel for at least a portion of their duration.

Notes for CPM again

Important Notes about Critical Path Method

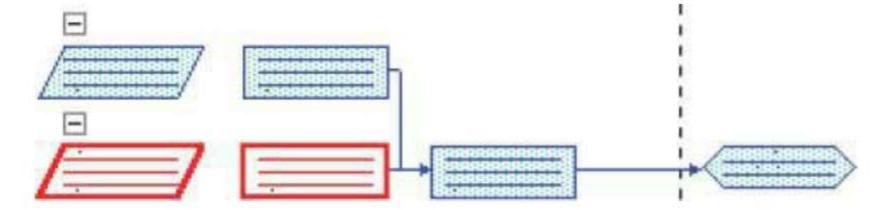

- > There can be more than one critical paths
- Having several critical paths or having several near critical paths mean project has high risk
- Critical path of the project can change over time
- ➤ There can be negative float, it means schedule is behind than the planned
- ➤ If there is negative float, you should compress the schedule.
- If you need to cut an activity duration in critical path, cut the earlier activity's duration

Understanding Network Diagram

For your projects

- Summary tasks are trapezoidal ______
- Detail tasks are rectangular –
- The Milestone Task is an elongated diamond –

- · Summary tasks are positioned to the left at the same level or above detail tasks.
- Summary tasks may be rolled up by clicking on the above the task and expanded by clicking on the above a rolled up summary task.

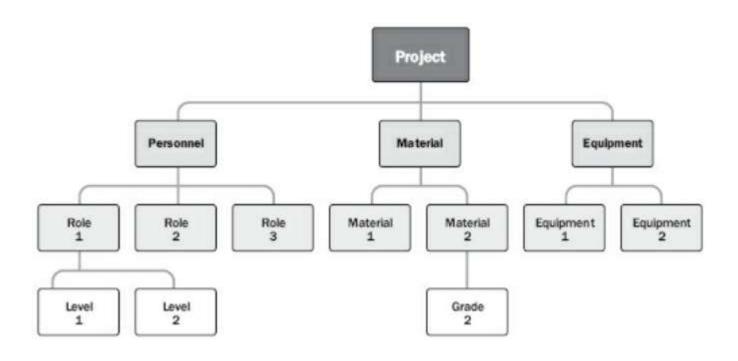

Creating Resources for your project

- A shortcoming of the scheduling procedures covered in the previous chapter is that they do not address the issues of resource utilization and availability.
 - The focus is on time rather than physical resources.
 - Also, in the discussion that follows it will not be sufficient to refer to resource usage simply as "costs".
 - Instead, we must refer to
 - individual types of labor,
 - specific facilities,
 - kinds of materials,
 - individual pieces of equipment,
 - other discrete inputs that are relevant to an individual project but are limited in availability.

Resource Allocation Problem

- Resources used as Input Resources Those that are required to complete the work:
 - Individual people by name.
 - Groups of people by trade or skill.
 - Individual equipment or machinery by name.
 - Groups of resources such as Crews or Teams made up of equipment and machinery.
 - Materials or Money.

Resource Breakdown Structure

Creating Resources for your project

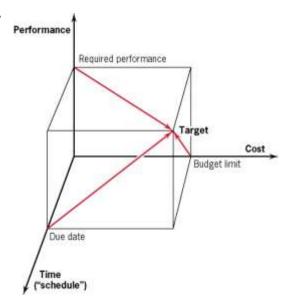

| Team Planner • | Assi Resou | | Add Resources * | Information | Notes Details | Level Selection | | evel | ear Leveling ext Overalloca | ation |
|-------------------|---------------|--------------|--------------------|-------------|---------------|--------------------|-----------|------------|--------------------------------|-----------|
| View | As | signments | Insert | Pro | perties | | | Level | | |
| | 0 | Resource Nam | ie | Type | Material | Initials | Group | Max. Units | Std. Rate | Ovt. Rate |
| | | ⊿ Group: N | o Value | | | | | | | |
| 7 | | Report E | Binding | Material | Each | RB | | | \$100.00 | |
| | | ₄ Group: C | ontractor | | | | Contrac | | | |
| 6 | | Speciali | st Consultan | Cost | | SC | Contracto | | | |
| | | ⊿ Group: O | ffice | | | | Office | 400% | | |
| 1 | ÷ | Project I | Manager | Work | | PM | Office | 100% | \$120.00/h | \$0.00 |
| 2 | | Systems | Engineer | Work | | SE | Office | 100% | \$90.00/h | \$0.00 |
| SHEET 5 | | Purchas | ing Officer | Work | | PO | Office | 100% | \$70.00/h | \$0.00 |
| | | Clerical | Support | Work | | CS | Office | 100% | \$50.00/h | \$0.00 |
| RCE | | ₄ Group: S | ite | | | | Site | 100% | | |
| ESOURCE | | Project : | Support | Work | | PS | Site | 100% | \$80.00/h | \$0.00 |
| ES | | | | | | | | | | |

Resource Allocation

One cannot save time—one can only spend more or less of it.

- The PM should be able to do trade offs between TCP
- Otherwise, if TCP are fixed means the project is overdetermined

A system-constrained task requires a fixed amount of time and known quantities of resources.

Ex: The material "cook-time" is fixed. No trade-offs are possible. Required resources should be available when needed.

Resource Loading

Assign Resources To WBS

| | Career Day Project Resource Usage Calendar | | | | | | | | | | | | | | | |
|---------------|--|-----------|-----|-----|-----|-----|-----|------|------|-----|-----|-----|-----|------|-----|-----|
| May June July | | | | | | | | | | | | | | | | |
| ID | Resource Name | Work | 25 | 2 | 9 | 16 | 23 | 30 | 6 | 13 | 20 | 27 | 4 | -11. | 18 | 25 |
| 1 | Secretary | 1,020 hrs | 24h | 40h | 40h | 40h | 88h | 120h | 102h | 40h | 40h | 40h | 40h | 40h | 40h | 40h |

| g | 4 | 0 | 0 |
| h | 11 | 5.4 | 2.32 |
| i | 18 | 28.4 | 5.33 |
| j | 8 | 4 | 2 |

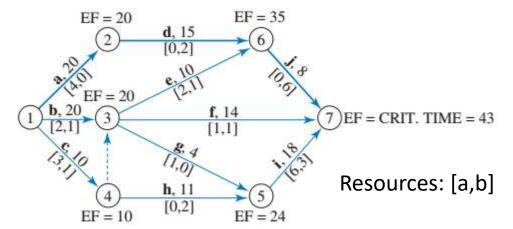

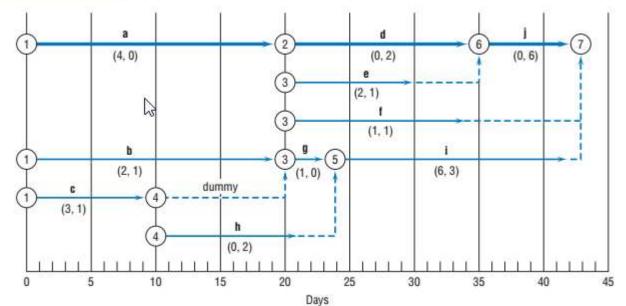

Figure 9-4 The AOA network of Table 8-2.

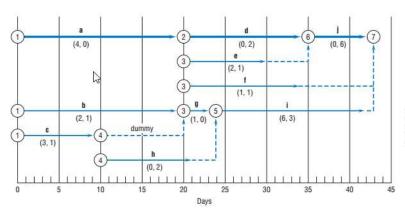

Modified AoA

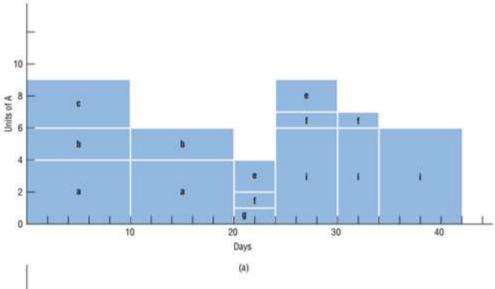

Resources: (a, b)

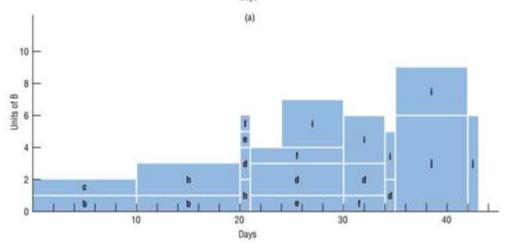

Resource Leveling

Try to level over time Meaning smother usage

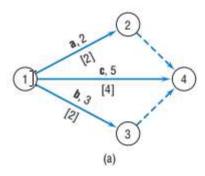

What are the advantages of Smooth resource usage:

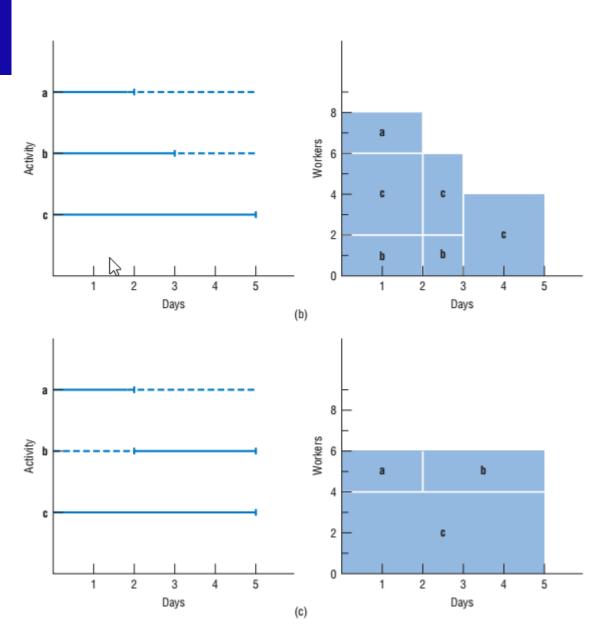

Resource Leveling example

One resource Road workers

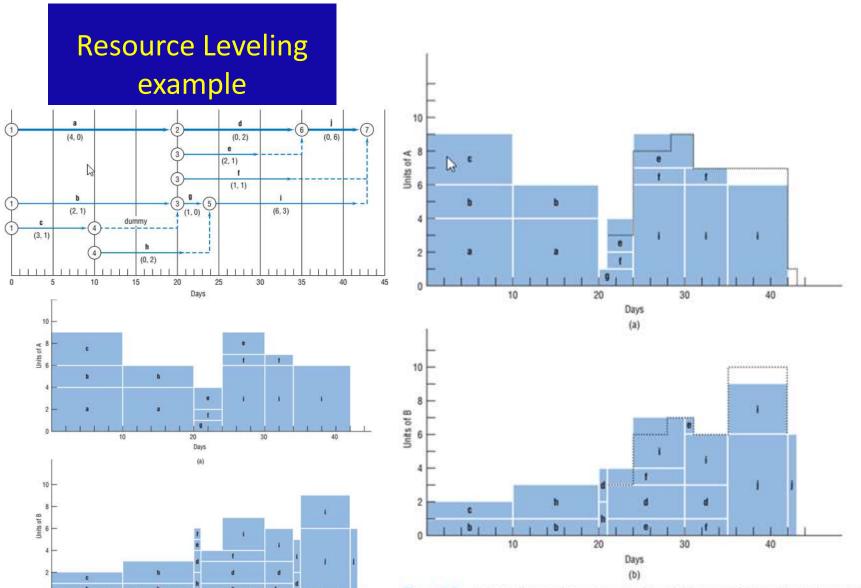

Figure 9-8 (a) Load diagram for resource A with activities e and f delayed by 1 day each. (b) Load diagram for resource B with activities e and f delayed by 1 day each.

Days

Resource Loading/Leveling Uncertainty

PM should use its operational abilities against uncertainties

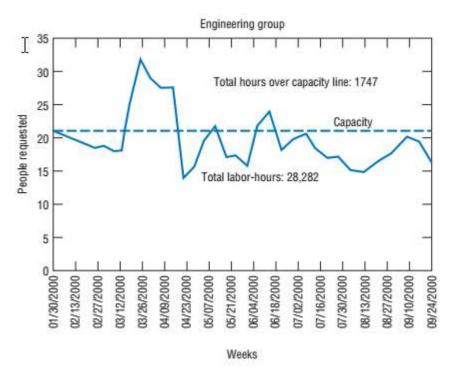

Figure 9-9 Thirty-four-week resource logging chart for a software engineering group.

Constrained Resource Scheduling

- Heuristic methods
 - Most suitable for large, complex, real life projects
 - Shift some activities according to some rules
 - Minimum slack first gives best result usually
- Optimization models

Heuristic Methods

Only feasible method for large and complex problems of the Real World

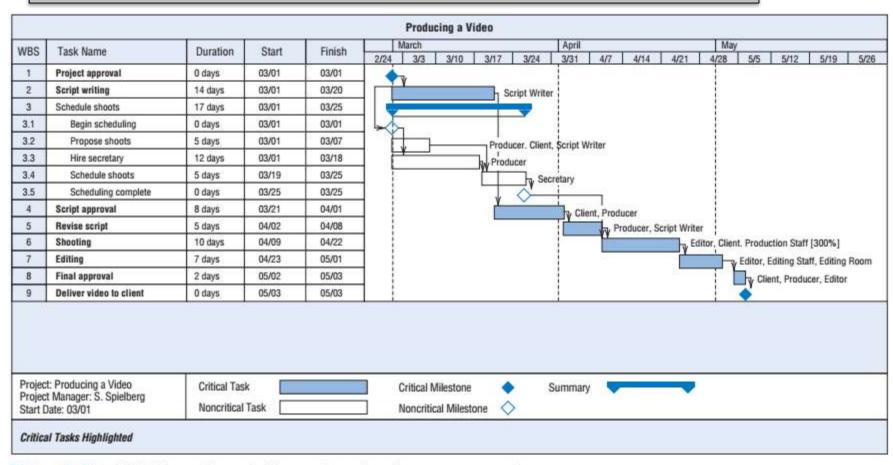

Figure 9-10 MSP Gantt chart of video project showing resource needs.

Heuristic Methods

MS-Project can handle the problem. Result may not be optimal but quite good.

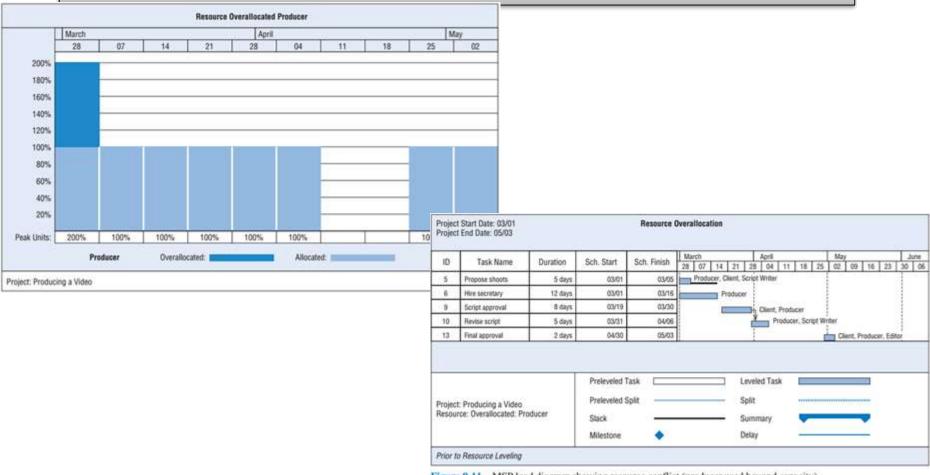

Figure 9-11 MSP load diagram showing resource conflict (producer used beyond capacity).

Heuristic Methods

MS-Project can handle the problem. Result may not be optimal but quite good.

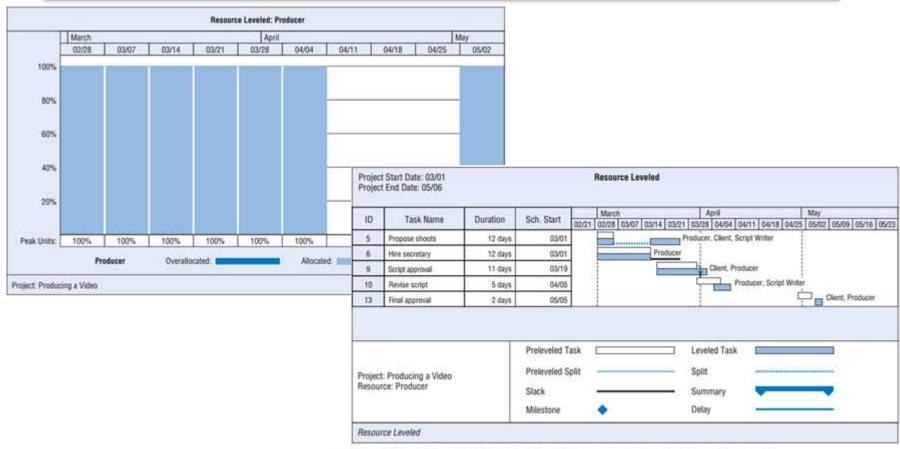

Figure 9-12 MSP rescheduling to level producer resource usage without exceeding capacity.

Priority rules for Heuristic

PM may apply simulation test. If a significant improvement is not the outcome then your first heuristic approach is good for the PM.

- As soon as possible Default for MS-Project.
- As late as possible Use slacks to defer payments.
- Shortest task first Maximizes number of tasks that can be completed.
- Most resources first Assumes most important tasks use highest resources.
- Minimum slack first Reduces risk on project duration.

Gives best result usually.

- Most critical followers Reduces risk of the PM.
- Most successors Similar to previous but not only for the critical path.
- Arbitrary No rule at all. According to the ideas of stakeholders or the boss.

Optimization Models

There were lots of attacks since 1970ies.

Do not create better results in most practical cases against Heuristic yet.

- Linear programming
- Programming and Enumeration techniques

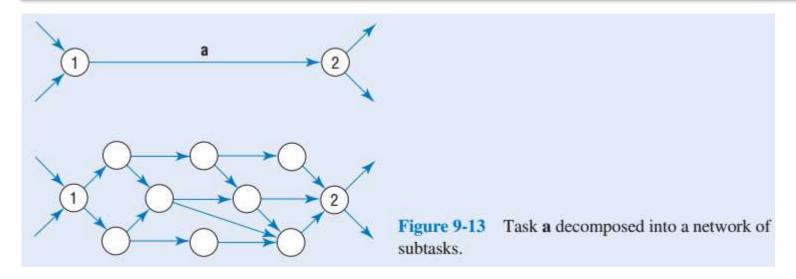

Multi project approach

Then you may shift resources between projects.

Also you may decompose one big project task into smaller and manageable ones. And you may shift resources between.

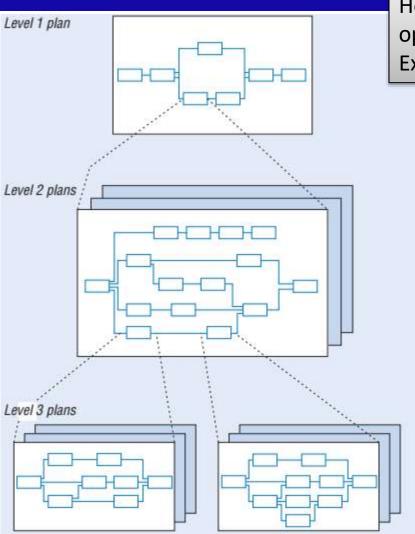

It is an optimization too.

Dividing too much may cause increase in managerial and other costs.

Dividing projects into sub-projects

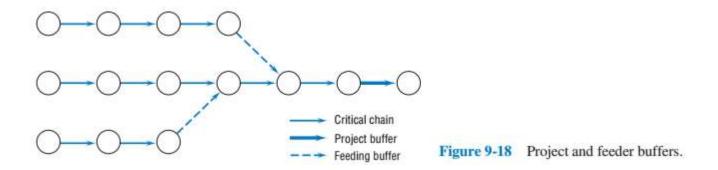

How much to decompose is an optimization too and needs Expert Judgement.

Figure 9-14 Hierarchy of Gantt charts. Source: F. L. Harrison (1983). Advanced Project Management. Hants, U.K.: Gower.

Project Planning Completed

Next is Execution

- Be aware of human complex psychology and try to be a leader not manager.
- Keep buffer high if you meet complexity. (And do not tell to any body)
- Use motivation factors high if you are able.
 (Use anything to motivate, never punish with salary cut)
- Keep it simple to be able to manage
 Do not bother your team with complexity
 (which makes them afraid and working less).
- Share the success with visible numbers.
- Try to use tools to manage projects,
 but do not advertise before feeling the comfort and success with them.

Resource Management Overview

Project Resource Management Overview

9.1 Plan Resource Management

- 3 Imputs
- 1 Project charter
- 2 Project management plan
- 2 Project documents
- A Enterprise environmental Factors 5 Organizational process
- streets 2 Toole & Tacheigues
- .1 Expan judgment
- .2 Data representation
- .3 Organizational theory.
- A Meetings
- 3 Gurputz
 - J Resource management plan
 - 2 Team charter
- 3 Project do cumunts updates

9.4 Develop Team.

- .1 lopats
 - Project management plan
 - 2 Freject documents
 - 3 Enterprise anniversmental factors
 - A Organizational process satut.
- 2 Tools & Techniques
 - 1 Colocation
 - 2 Virtual tunns
- 3 Communication technology A Interpersonal and team skills
- 5 Recognition and rewards
- 5 Training
- 7 Individual and team assessments
- E Mootings
- 3 Supus
 - 1 Teamperformance **BSSESSMETES**
 - Z Change requests
 - 2 Project management plan up dates
 - # Project documents updates
 - 5 Entarprise amirisomental factors updates
 - I Organizational process assets up Contest

9.2 Retimate Activity Recourses

- 1 Inputs
 - 1 Project management plan 2 Project decements
- 3 Enterprise environmental
- A Organizational procuss aspets.
- 2 Tools & Techniques
 - I Report sudgment
 - 2 Better-up estimating
 - 3 Analogous estimating
- A Parametric agrimating

- 2 Change requests
- 3 Project management plan updates
- A Project documents up dates

The Last Workshop

Do not forget to complete the last workshop – 5 Pts.

Problems - Ch 9

4. Given the following highway rerouting project,

| Activity | Immediate Predecessor | Activity Time (months) |
|-----------------------|--------------------------|------------------------|
| A: Schedule crew | 3 7 - 1 3 | 4 |
| B: Schedule equipment | - | 6 |
| C: Plan new route | A | 2 |
| D: Costs meet budget? | В | 6 |
| E: Inform public | C, B | 3 |
| F: Put out signs | C, B | 3 |
| G: Begin rerouting | D, E | 5 |

- (a) Draw the network.
- (b) Find the ESs, LSs, and slacks.
- (c) Find the critical path.
- (d) If the project has a 1 1/2-year deadline for reopening, should we consider crashing some activities? Explain.

Consider the following activity information and the constraint that the project must be completed in 16 weeks.

| Activity | Prec. Evt. | Suc. Evt. | TE (weeks) | Prec. Activ. |
|----------|---------------|--------------|---------------|-----------------|
| a | 1 | 2 | 3 | none |
| b | 1 | 3 | 6 | none |
| c | 1 | Co. | 8 | none |
| d | 2 | 5 | 7 | a |
| e | 3 | 5 | 5 | b |
| f | 4 | 5 | 10 | c |
| g | 4 | 6 | 4 | c |
| h | 5 | 7 | 5 | d,e,f |
| i | 6 | 7 | 6 | g |

In addition, activities **c**, **f**, **h**, and **i** may be crashed as follows. Assume partial crashing.

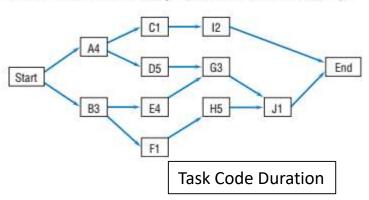

| Activity | Crash Time (weeks) | Additional Cost per Week | |
|----------|-----------------------|-----------------------------|--|
| c | 7 | \$40 | |
| f | 6 | 20 | |
| h | 2 | 10 | |
| I | 3 | 30 | |

Find the best schedule and its cost

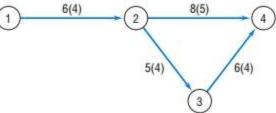

Problems – Ch 9

9. Consider the project network below. Suppose the duration of both activities A and D can be reduced to one day, at a cost of \$15 per day of reduction. Also, activities E, G, and H can be reduced in duration by one day at a cost of \$25 per day of reduction. What is the least-cost approach to crash the project two days? What is the shortest "crashed" duration, the new critical path, and the cost of crashing?

10. Given a network for an HR training project with normal times and crash times (in parentheses), find the costduration history. Assume indirect costs for facilities and equipment are \$100 per day. The data are:

| Activity | Time Reduction, Direct Cost per Day | | |
|-----------------------|--|--|--|
| 1-2: Obtain room | \$30 first, \$50 second | | |
| 2-3: Select trainer | \$80 | | |
| 3-4: Invite personnel | \$25 first, \$60 second | | |
| 2-4: Check budget | \$30 first, \$70 second, \$90 third | | |
| 6(4) | 8(5) | | |

12. The network for shooting a TV commercial as shown in the table has a fixed cost of \$90 per day, but money can be saved by shortening the project duration. Find the leastcost schedule.

| Activity | Normal Time | | Cost Increase (1st, 2nd, 3rd day) | | |
|-------------------------|----------------|----|--------------------------------------|--|--|
| 1-2: Contract personnel | 7 | 4 | \$30, 50, 70 | | |
| 2-3: Obtain stage props | 9 | 6 | 40, 45, 65 | | |
| 1-3: Rent equipment | 12 | 10 | 60, 60 | | |
| 2-4: Contract studio | 11 | 9 | 35, 60 | | |
| 3-4: Set time and date | 3 | 3 | - | | |

Problems - Ch 9

13. Given the following project to landscape a new building site,

| Activity | Immediate Predecessor | Activity Duration (days) | Resource Used |
|-------------------------|--------------------------|--------------------------------|------------------|
| A: Get plants | - | 2 | X, Y |
| B: Get flowers | A | 2 | X |
| C: Obtain soil | A | 3 | X |
| D: Obtain fertilizer | B, C | 4 | X, Y |
| E: Select labor | D | 3 | W, X |
| F: Set date | D | 1 | W, X, Y |
| G: Begin | E, F | 2 | X, Y |

- (a) Draw a Gantt chart using MSP.
- (b) Find the critical path and project duration in days.
- (c) Given that each resource is assigned 100 percent to each task, identify the resource constraints.
- (d) Level the resources and determine the new project duration and critical path.
- (e) Identify what alternative solutions can be used to shorten the project duration and not over-allocate the resources.

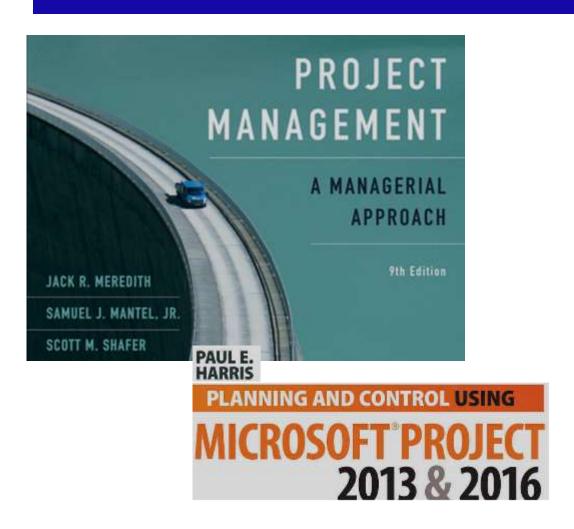

15. Given the following project (all times are in days):

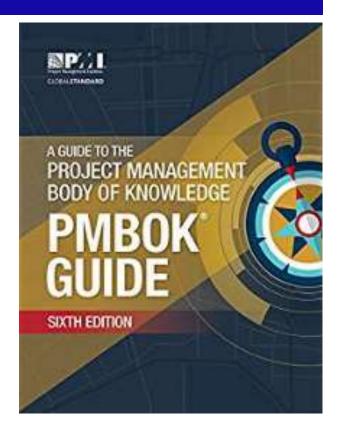

| Activity | Pre- decessor | Normal Time | Normal Cost | Crash Time | Crash Cost |
|----------|------------------|----------------|----------------|---------------|---------------|
| a | 2 | 5 | \$50 | 3 | \$150 |
| b | - | 4 | 40 | 2 | 200 |
| c | b | 7 | 70 | 6 | 160 |
| d | a, c | 2 | 20 | 1 | 50 |
| e | a, c | 3 | 30 | | _ |
| f | b | 8 | 80 | 5 | 290 |
| g | d | 5 | 50 | 4 | 100 |
| h | e, f | 6 | 60 | 3 | 180 |

- (a) Draw the network and find the critical path, time, and cost for an all-normal level of project activity.
- (b) Calculate the crash cost-per-day (all activities may be partially crashed).
- (c) Find the optimal way of getting an 18-day delivery time. What is the project cost?
- (d) Find the optimal way of getting a 16-day delivery time. What is the project cost?
- (e) Calculate the shortest delivery time for the project. What is the cost?
